

## Dysphagia Basics Following Tracheostomy in the Adult Patient

## Considerations for the Non-Speech-Language Pathologist (Non-SLP)

Swallowing Terms:	
<ul> <li>Dysphagia</li> <li>Odynophagia</li> <li>Bolus</li> <li>Penetration</li> <li>Aspiration</li> <li>Silent aspiration</li> <li>Stasis or residue</li> <li>Reflux</li> </ul>	KEY POINTS/NOTES
Consequences of Dysphagia:	
<ul> <li>Malnutrition</li> <li>Dehydration</li> <li>Prolonged hospitalization</li> <li>Aspiration pneumonia</li> <li>Poor quality of life</li> <li>Death</li> </ul>	
Stages of Swallowing:	
<ul> <li>Oral Stage <ul> <li>Oral preparatory</li> <li>Oral transit</li> </ul> </li> <li>Pharyngeal Stage <ul> <li>Velopharyngeal closure</li> <li>Elevation and anterior movement of the hyoid and larynx</li> <li>Airway closure</li> <li>Opening of the cricopharyngeal sphincter</li> <li>Base of tongue retraction</li> <li>Pharyngeal retraction</li> </ul> </li> <li>Esophageal Stage <ul> <li>Bolus moves from the UES through the esophagus and into the stomach through the LES</li> </ul> </li> </ul>	
Causes of Dysphagia:	
Primary diagnosis	
Critical illness myopathy or polyneuropathy	
Altered mental status	
latrogenic causes     Discrepagio solute discrepagione del solute del solute discrepagione del solute discrepagione del solute discrepagione	
Dysphagia related to tracheostomy	
Signs and Symptoms of Dysphagia:	
<ul> <li>Recurrent pneumonia</li> <li>Unintentional weight loss</li> <li>Coughing, choking, or throat clearing during or after swallowing</li> </ul>	
Wet, gurgly vocal quality     Trideness of application in treesh tube or accurated from treesh	
<ul><li>Evidence of aspiration in trach tube or coughed from trach</li><li>Pain with swallowing</li></ul>	
Sensation of food sticking in throat or chest     Senset 20 minutes to 1 hours often most	
<ul><li>Fever 30 minutes to 1 hour after meal</li><li>Shortness of breath during meals</li></ul>	
Chest congestion after meals

Excessive secretions

## Dysphagia Basics Following Tracheostomy in the Adult Patient

KEY POINTS/NOTES

## Considerations for the Non-Speech-Language Pathologist (Non-SLP) continued

Role of the Speech-Language Pathologist (SLP)	KEY POINTS/NOTES
Swallowing assessments	
o "Bedside" - Clinical Bedside Swallowing Evaluation	
<ul> <li>VFSS or MBS - Videofluoroscopic Swallow Study or Modified Barium Swallow</li> </ul>	
<ul> <li>FEES® - Fiberoptic Endoscopic Evaluation of Swallowing</li> </ul>	
Dysphagia treatment	
o Oral hygience	
o Compensatory postures and strategies	
o Rehabilitative exercise	
o Dysphagia treatment for patients with tracheostomy	
<ul> <li>Place a Passy Muir<sup>®</sup> Valve (PMV<sup>®</sup>) to restore a closed aerodigestive system</li> </ul>	
PassyMuir Valve:	
The only no-leak Valve	
<ul> <li>Air is redirected through the upper airway</li> </ul>	
<ul> <li>Swallowing benefits</li> </ul>	
o Restore the normal breathing/swallowing pattern	
o Improve secretion managment	
o Reduce aspiration	
o Improve cough effectiveness	
Dysphagia Myths:	
<ul> <li>No gag reflex means patient can't swallow.</li> </ul>	
No coughing means no aspiration.	
When in doubt, thicken liquids.	
The chin tuck works for everyone.	
Just give it time; it will get better.	
<ul> <li>The tracheostomy cuff prevents aspiration.</li> </ul>	
<ul> <li>Aspiration always leads to aspiration pneumonia.</li> </ul>	
Dysphagia Management Requires a Team	
<ul> <li>What can the RT and RN do to help their patients with dysphagia?</li> </ul>	
o Work closely with the SLP.	
o Advocate for early SLP consults.	
o Perform oral care before meals.	
o Watch for signs and symptoms of aspiration.	
<ul> <li>Help patients adhere to dysphagia recommendations.</li> </ul>
